EXPERIENCE

Software Development Engineer

Genpact India

January 2025 – Present, Remote

- Designed and built a Conversational AI Intake Agent end-to-end using Semantic Kernel and AWS Bedrock, including streaming SSE endpoints, a single-tool architecture that reused an existing extraction pipeline, and full conversation history support – enabling an LLM-driven procurement intake flow accessible to non-technical users.
- Implemented an end-to-end RAG pipeline integrated into an enterprise level chatbot, processing user-uploaded documents through structured data intake, vector embedding generation, similarity matching, and LLM-based contextual response generation.
- Developed and deployed an end-to-end Metric Dashboard using Django REST Framework and ReactJS, enabling real-time visualization of key financial KPIs, which reduced manual reporting time by 45% and improved decision-making speed for leadership teams.
- Implemented cookie-based authentication using server-side validation techniques to strengthen application security and reduce exposure to XSS vulnerabilities.
- Built a Notification System from scratch on the backend – designed the notification data model with support for multiple delivery channels.

Software Developer Intern

Walkover Web Solutions

February 2024 – December 2024, Indore

- Developed AI middleware infrastructure and structured response handling in Node.js and Python, facilitating secure API key usage and seamless integration of Groq, Claude, and GPT LLM models through custom JSON schemas and function-calling logic.
- Designed and maintained bridge archiving features within backend services, ensuring efficient data flow and leveraging advanced query optimization in database.
- Conducted load/concurrency testing using JMeter to ensure reliability of chat completion APIs under high traffic.

PROJECT

HireLens AI – AI-Powered Recruitment Screening Platform

- Integrated automated resume parsing and data normalization pipelines to standardize candidate submissions and reduce manual preprocessing for hiring teams.
- Built a multi-tenant recruitment SaaS PostgreSQL/pgvector and LangGraph to asynchronously parse, semantically match and rank candidate resumes against job requirements.
- Implemented hybrid candidate scoring combining deterministic skill matching, vector similarity and LLM-based reasoning, with explainable evidence for each score.
- Designed JWT/HttpOnly-cookie authentication, rate limiting, audit logging and AI-provider fallback between Gemini and Groq.

Hotel Booking System

- Deployed a scalable hotel booking platform that processed 1,200+ monthly reservations, using Django and React to achieve a 40% reduction in booking-related user queries and support tickets within 6 months.
- Implemented advanced filtering and sorting features for booking records with JavaScript and Bootstrap, enabling staff to efficiently locate reservations and enhance workflow productivity.
- Deployed a conversational AI interface to deliver instant responses to user inquiries and streamline chat history management.

EDUCATION

Bachelor Of Technology in Electronics and Instrumentation Engineering

Shri G.S Institute of Technology and Science • Indore • 2024 • 7.8

CBSE Higher Secondary Certificate

ILVA Hr. Sec. School • Indore • 2020 • 84

AWARDS & HONORS

Bronze Recognition Award for consistently exceeding daily targets during Workday tool testing.

Genpact India • 2025

SKILLS

Programming Languages: Python, Java, C/C++

Backend: FastAPI, Django, Spring Boot, Node.js

Databases: PostgreSQL, MongoDB

Tools: Git, JUnit, JMeter, Selenium, VS Code
